DGL Principal Earns PTOE License

Maumee, Ohio, February 2, 2006 – Laurie Adams, a DGL Principal responsible for all aspects of the firm’s traffic engineering and site development business, received her professional traffic operations engineer certification recently by successfully completing the Institute of Transportation Engineers written examination. This accomplishment supplements Laurie’s professional engineering credentials and is a significant achievement in her professional career - currently there are only 18 professional traffic operations engineers in the entire state of Ohio.

A PTOE provides expert opinions in both traffic operations and engineering. The PTOE must satisfy exacting criteria in the areas of standards, recommended practices and policies/procedures necessary to operate effective and efficient traffic facilities. Based on their experience and credentials, a PTOE often performs comprehensive access management projects and safety studies. The traffic operations knowledge that they possess can also be utilized to increase efficiency within a given intersection or roadway corridor – a primary factor in securing Congestion Mitigation Air Quality (CMAQ) funding.

Stephen Way, Managing Director of DGL, remarked, “The PTOE certification is a wonderful accomplishment for Laurie and serves to reinforce the knowledge and experience that she is recognized for throughout northwest Ohio.”

DGL Consulting Engineers, LLC is a consulting engineering firm located in Maumee, Ohio, that specializes in all aspects of the transportation/traffic engineering industry, as well as civil and structural engineering to support institutional/industrial/commercial/residential development throughout the tri-states region. Founded in 1926, DGL is proud of our 80 year history of providing creative solutions to our customers’ most difficult engineering challenges. For more information: www.dgl-ltd.com
